

# Corn cultivation

in Poland

# Wipasz S.A. is one of the largest feed manufacturers in Poland.

---

On our **900-hectare** experimental farm, we verify the best ways to grow crops ourselves, and then we share our knowledge and create trends in Polish agriculture. We are the only company in Poland to have our own **Scientific Institute**, where we continuously conduct research on the nutrition and breeding of Polish chicken.

Such scientific and research facilities have allowed us to develop **the most optimal FAO numbers for each region of Poland.**

Poland already produces **8 million tonnes of corn annually.** In 2022, Wipasz S.A. purchased **400,000 tons of corn** nationwide.

By region:

**30 thousand tons in the north** (Krosno, Morąg, Wadağ, Galwuny)

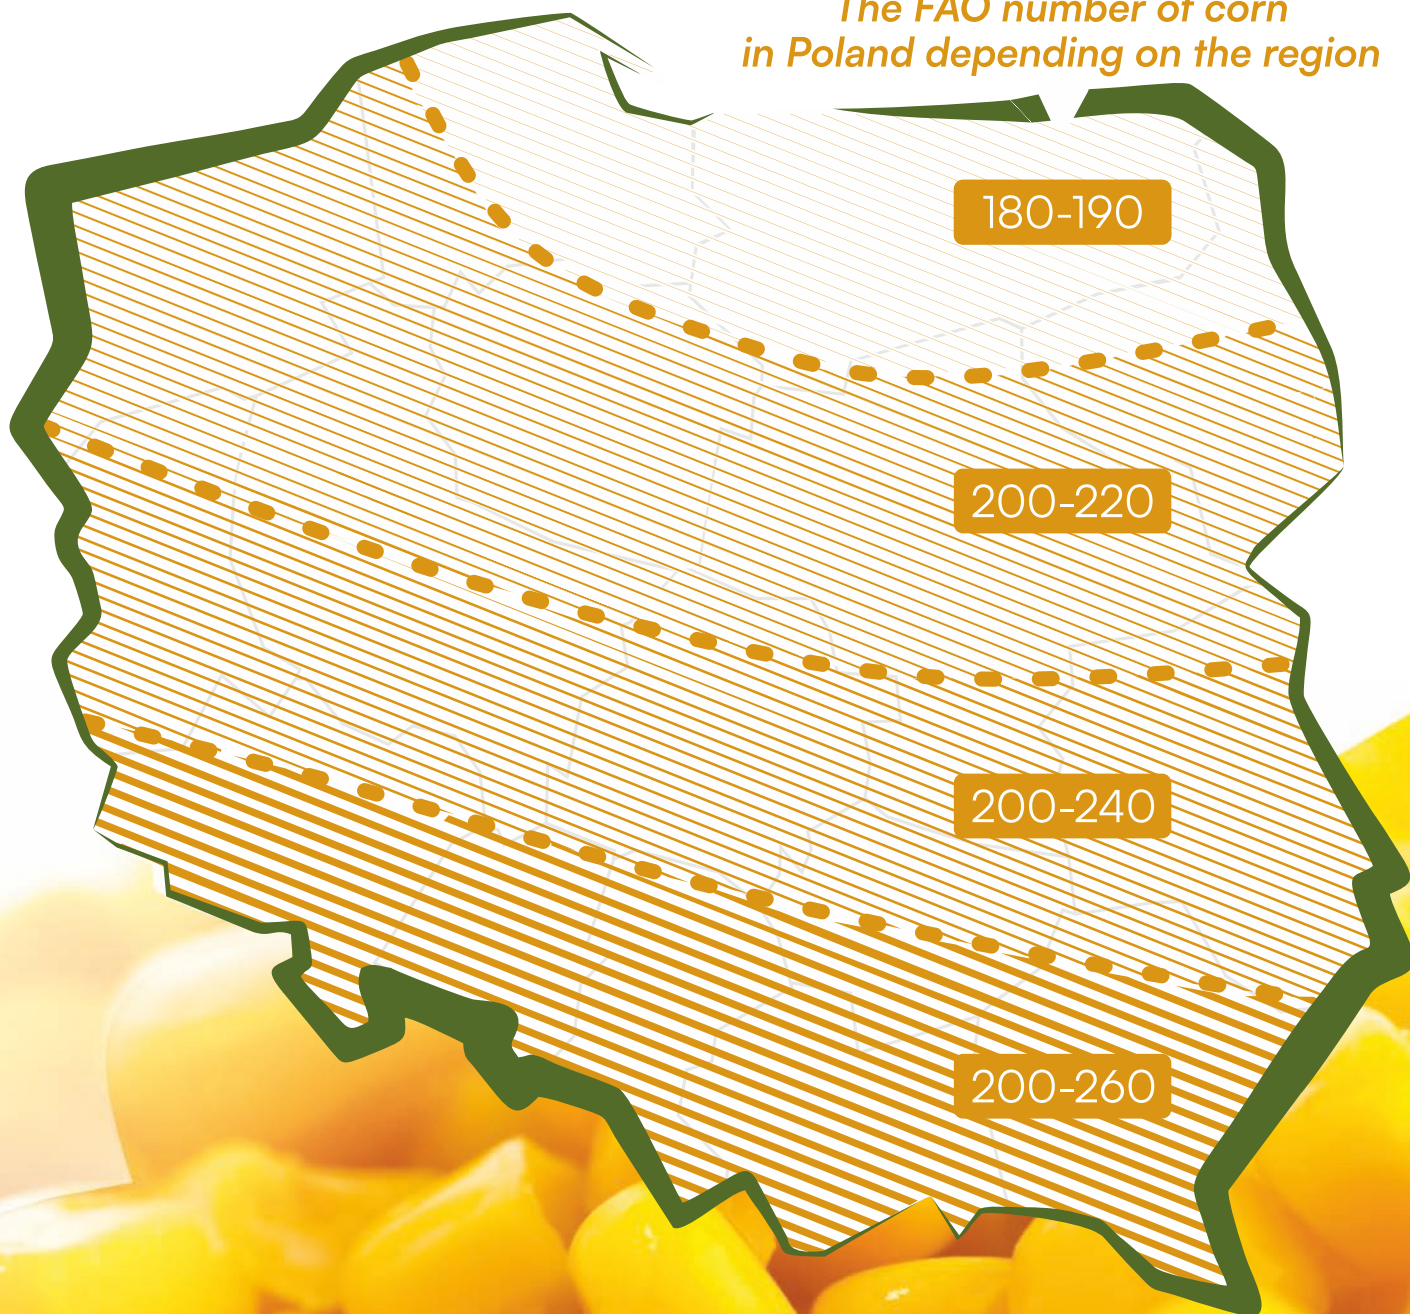

**230 thousand tons in the center** (Witkowo, Koło, Miedzyrzec Podlaski)

**140 thousand tons in the south** (Zadąbrowie)

The FAO number should be precisely matched to the sowing region, so that the corn fully completes its growth cycle and is mature by the harvest.

*The FAO number of corn in Poland depending on the region*

**A large FAO number does not guarantee a high yield!**

Corn with a moisture content of more than 35% is not suitable for animal feed – it is immature and will not be accepted at Wipasz S.A.'s buying stations.
